*

"Heart of Darkness"

*

*

Novel by James Joyce

*

*

*

Complete concordance of lexical diversity:

*

Determination of all lexical items (types) and their frequencies
from the normalized corpus by N-gram analysis.

*

(<http://en.wikipedia.org/wiki/N-gram>)

*

*

The maximum for N was found for this work as 68.

*

*

The normalization of the body was carried out by removal of all
spaces, punctuation, numbers, line- and page breaks,
wherein one or more special characters in a row,
are replaced by one single space character.

*

*

Remarks:

*

*

Upper / lower case is considered to be identical.

*

The analysis is carried out 68... 2-gram, down.

*

N contains 2 spaces delimiting types.

*

*

The content of each unit (type) is not in any
way once again considered in a different type!

*

The entire corpus here is thus shown repetition free.

*

*

*

Subsequent list is sorted in descending order of type's length.
(Number in parentheses: occurrence * length).
